BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ BLACK BORDERS
- ☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
- ☐ FADED TEXT OR DRAWING
- ☐ BLURRED OR ILLEGIBLE TEXT OR DRAWING
- ☐ SKEWED/SLANTED IMAGES
- ☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
- ☐ GRAY SCALE DOCUMENTS
- ☐ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

DATE MAILED: 10/06/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/068,895

Applicant(s)

ASAI ET AL.

Examiner

Cam Y T Truong

Art Unit

2172

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 May 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) 3 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4 and 5 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 11 February 2002 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-5 are pending in this Office Action.

Election/Restrictions

2. Applicant's election without traverse of group I (claims 1-2 and 4-5) in the reply filed on 5/21/2004 is acknowledged.

Specification

Content of Specification

- (a) Title of the Invention: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words may not contain more than 500 characters.
- (b) Cross-References to Related Applications: See 37 CFR 1.78 and MPEP § 201.11.
- (c) Statement Regarding Federally Sponsored Research and Development: See MPEP § 310.
- (d) Incorporation-By-Reference Of Material Submitted On a Compact Disc: The specification is required to include an incorporation-by-reference of electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.

Or alternatively, Reference to a "Microfiche Appendix": See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.
- (e) Background of the Invention: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:

Art Unit: 2172

- (1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field."
 - (2) Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98: A description of the related art known to the applicant and including, if applicable, references to specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."
- (f) Brief Summary of the Invention: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (g) Brief Description of the Several Views of the Drawing(s): See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- (h) Detailed Description of the Invention: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.

Art Unit: 2172

- (i) Claim or Claims: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP § 608.01(i)-(p).
- (j) Abstract of the Disclosure: See MPEP § 608.01(f). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).
- (k) Sequence Listing. See 37 CFR 1.821-1.825 and MPEP §§ 2421-2431. The requirement for a sequence listing applies to all sequences disclosed in a given application, whether the sequences are claimed or not. See MPEP § 2421.02.

Title

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Drawings

4. Minor informalities: Typographical error is shown in Fig. 2, in element 14 (SERCH INTERFACE). "SERCH" should be written as "**SEARCH**". In element 15 (SERCH UNIT), "SERCH" should be written as "**SEARCH**".

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Vora et al (or hereinafter "Vora") (US 5819273).

As to claim 1, Vora teaches a database system (fig. 1, col. 6, lines 37-43) comprising:

"a database in which data has been stored accessibly" as the mass memory device 17 of the server computer system 9 stores text documents, which may include other information such as graphics. These text documents are searched and retrieved by users of computer system 33. The mass memory is represented as a database (fig. 1, col. 6, lines 37-43);

"a search device for accessing the database in accordance with an applied search command and searching data that has been stored in said database" as processor 10 of the server 9 receives a search request from the processor 37 of the computer system 33 to search documents stored in mass memory 17. The processor 10 of server 9 is represented as a search device. The search request is presented as a search command (fig. 1, col. 6, lines 48-55);

"a command execution device, to which a command is entered, for applying a search command to said search device in accordance with this entered command" as

Art Unit: 2172

the computer system 33 allows a user to define a search request by typing into a keyboard keywords. The search request is performed by typically selecting an option representing a start search command, which is displayed on the display device 47. At this point, the processor 37 of computer system 33 sends this search request over the network through network interface 35 and network interface 25 to processor 10 of server 9. The above information shows that the processor 37 of computer system 33 executes the search request by sending the search request to processor 10 in accordance with selected start search command. Thus, the processor 37 of computer system 33 is presented as a command execution device. A start search command is represented as an entered command (fig. 1, col. 6, lines 40-55); and

“a first interface for separably connecting said search device and said command execution device” as network interface 35 is represented as a first interface for separably connecting the processor 10 and processor 37 (fig. 1, col. 6, lines 52-55).

As to claim 5, Vora teaches a method of controlling operation of a database server comprising the steps of:

“receiving a search command transmitted via a network” as processor 10 of server 9 receives a search request over the network through network interface 35 and network interface 25. The search request is presented as a search command (fig. 1, col. 6, lines 50-55);

"searching a database based upon the received search command" as performing a first search through the document stored in mass memory 17 based upon the received the search request (col. 6, lines 53-55);

"transmitting the received search command to another database server" as the server 63 receives search request from server 9. This information implies that the server 9 transmits the received search request from computer system 33 to the server 63 (fig. 1, col. 6, lines 60-64);

"receiving data, which represents search results, transmitted from the other database server in accordance with transmission of the search command to the other database server" as server 9 receives the search results of server 63 as remote searches after using a local bus 19 of server 9 to transmit the received search request to server 63. Thus, the server 9 combines the search results of such remote searches with the results of the search the server 9 performs on mass memory 17 (fig. 1, col. 6, lines 60-67; col. 7, line 1); and

"outputting, in mutually correlated form, data representing search results obtained by the search and data representing received search results" as displaying the combined results of such remote searches with the search results of the server 9 performs on data stored in memory 17 within one window. The combined results are represented as correlated form (fig. 1, col. 6, lines 65-67; col. 7, lines 1-4).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vora et al (or hereinafter "Vora") (US 5819273) in view of Sanada et al (or hereinafter "Sanada") (US 6484245).

As to claim 2, Vora further teaches "a storage device for storing data readably" as information storage devices coupled to server 63 for storing data. This data is searched and retrieved through by searching software on server 63 (col. 6, lines 58-59).

Vora does not explicitly teach the claimed limitation "a storage controller for accessing said storage device and reading data that has been stored in said storage device or writing data to said storage device in accordance with an applied read/write command; and a second interface for separably connecting said storage controller and said command execution device; said command execution device applying a read/write command to said storage controller in accordance with the entered command".

Sanada teaches the above claimed limitations:

"a storage controller for accessing said storage device and reading data that has been stored in said storage device or writing data to said storage device in accordance with an applied read/write command" as the storage controller 40 controls accessing to

Art Unit: 2172

the disk array for reading data from there upon receipt of read command information from host computer 10 (fig. 1, col. 5, lines 9-10; col. 6, lines 1-8);

"and a second interface for separably connecting said storage controller and said command execution device" as Fibber Channel Fabric as an interface for separably connecting the storage controller and the host computer 10. Because the host computer 10 generates an access request and then executes the access request by sending access request to the microprocessor of the storage controller; thus, the host computer is represented as command execution device (fig. 1, col. 5, lines 35-37; col. 6, lines 1-3);

"said command execution device applying a read/write command to said storage controller in accordance with the entered command" as the host computer can apply a read command or write command to microprocessor of the storage controller. The above information implies that the host computer has included a command to can send a read or a write command to the microprocessor of the storage controller. This command is represented as the entered command (col. 5, lines 45-55; col. 6, lines 1-3).

It would have been obvious to a person of an ordinary skill in the art at the time the invention was made to apply Sanada's teaching of using storage controller to control subsystem 50 for reading data, Fibber Channel Fabric for connecting the storage controller and the host computer 10, and applying a read command from the host computer 10 to the storage controller to Vora's system in order to improve the integrity of Vora's system by allowing a user to access a storage device for reading or writing

stored data in the storage device and further eliminating unauthorized access attempts from the host computers to the storage control device.

9. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vora et al (or hereinafter "Vora") (US 5819273) in view of De Bellis (US 6760720).

As to claim 4, Vora teaches a database server (fig. 1, col. 6, lines 37-40) comprising:

"a first receiving device for receiving a search command transmitted via a network" as the network interface 25 of server 9 receives a search request transmitted from processor 37 over the network. The network interface 25 is represented as a first receiving device. The search request is represented as a search command (fig. 1, col. 6, line 51-55);

"a search device for searching the database based upon the search command received by said first receiving device" as the processor 10 of server 9 executes the received search requests from computer system 33 by performing a first search through the documents is stored in mass memory 17 as a database. The processor 10 is represented as a search device (col. 6, lines 51-55);

"a transmitting device for transmitting the search command, which has been received by said first receiving device, to another database server" as a local bus 19 of server 9 is used to transmit the received search requests from server 9 to the server 63. After receiving the search request from server 9, the server 63 executes the search

request by searching the data. The local bus 19 of server 9 is represented as a transmitting device (fig. 1, col. 6, lines 60-66; col. 6, lines 1-5);

“for receiving data, which represents search results, transmitted from said other database server in accordance with transmission of the search command to said other database server by said transmitting device” as server 9 receives the search results of server 63 as remote searches after using a local bus 19 of server 9 to transmit the received search request to server 63. Thus, the server 9 combines the search results of such remote searches with the results of the search the server 9 performs on mass memory 17 (fig. 1, col. 6, lines 60-67; col. 7, line 1);

“and an output device for outputting, in mutually correlated form, data representing search results obtained by the search by said search device and data representing search results received by said second receiving device” as I/O device (s) 23 of the server 9 is used to display or output the combined results of such remote searches with the results of the server 9 performs on data stored in memory 17 within one window. The I/O device (s) of the server 9 is represented as an output device. The combined results are represented as correlated form (fig. 1, col. 6, lines 65-67; col. 7, lines 1-4).

Vora does not explicitly teach the claimed limitation “a second receiving device”.

De Bellis teaches a search engine has a Request Analyzer 130 for receiving search request from client 114 and a Database Driver 170 for receiving results of search of the remote database 12 on Internet. The Database Driver 170 is represented

Art Unit: 2172

as a second receiving device (figs 3&9, col. 4, lines 45-60; col. 4, lines 20-25; col. 9, lines 40-43).

It would have been obvious to a person of an ordinary skill in the art at the time the invention was made to apply De Bellis's teaching of a Database Driver 170 for receiving results of search of the remote database 12 on Internet to Vora's system in order to improve flexibility of Vora's system by performing searching/retrieving and displaying a search result to a user quickly and further preventing network traffic between client and server.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure

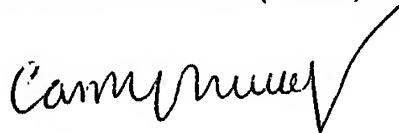

US 6694413 is issued to Mimatsu et al on 2/17/2004. The subject matter is considered pertinent to claim 2 (e.g., disk controller in fig. 1).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cam Y T Truong whose telephone number is (703) 605-1169. The examiner can normally be reached on Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Breene can be reached on (703) 305-9790. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
